Supplementary Figure 3. Mean ± SEM suppression ratios calculated for the first 1000 milliseconds of cue presentation (Safety, blue; Uncertainty, purple; Danger, red) are shown for (A) Controls, (B) Heavy Drinkers and (C) Moderate Drinkers over the 16 sessions of fear discrimination. Mean ± SEM suppression ratios calculated for the last 1000 milliseconds of cue presentation are shown for (D) Controls, (E) Heavy Drinkers and (F) Moderate Drinkers. The shaded region identifies the sessions on which the primary analyses were performed.
