Supplementary Figure 4. An analysis identical to Figure 3 of the main text was performed for mean suppression ratios on fear discrimination sessions 9-12. Largely, the same pattern of rapid discrimination observed in the final 4 sessions was observed in sessions 9-12 in (A, B) Controls, (C, D) Heavy Drinkers and (E, F) Moderate Drinkers. Thus, even in sessions 9-12, Controls and Moderate drinkers demonstrated sub-second fear discrimination, while Heavy Drinkers did not.
